NEWS BRIEF Fruitland Solid Waste Removal DRAFT 10 31 16 JM comments.docx

Hi Nahal –

Please the attached news brief for my edits. I am also re-sending the edited Fact Sheet so that you can ensure both documents are congruent.

Thank you,

Thanks Alejandro. Cheryl Lee did create the fact sheet. With Halloween on Monday, moving the outreach and fact sheet distribution to Tuesday seems better. Additionally, due to some recent developments we may not be loading trucks next week. Instead we may just work on segregation and assessment of the debris piles. Won't know more about this until this afternoon.

Please see the attached for my comments/edits.

Thanks for all the helpful information Jason. I incorporated everything as best I could. Im currently on travel in Tuba City, AZ. Will be working tomorrow, but will have a hard time staying connected. The best way to find me may be to email or call my work cell at, 415-301-1591. I made all the changes to correctly identify site materials as "solid wastes" and added Romie's contact information, since she continues doing outreach for the Site.

Nahal and Jason, please take another look at the factsheet and feel free to share with

anyone else who may need to provide input. I am unsure who professionally did the layout (I assume it was our graphics specialist Cheryl Lee) but it would be helpful to know who to send it to since the most effective layout could follow the last factsheet format. Nahal feel free to help move this along, since I'll be limited in effectiveness tomorrow. Also, I can do the Spanish translation tomorrow evening, assuming we have final text, after my work here in Tuba City.

Jason, as far as next week outreach on Monday, I would recommend going out a little earlier (Starting at 3pm), since we don't want to run too much into parents last minute Halloween preparations. Let me know what you think. Thanks in advance.

Alejandro Diaz

Hi Alejandro –

To clarify, CalRecycle's Solid Waste and Tire Cleanup Program will be disposing of "solid wastes" at the site. Please remove any reference to "recyclable materials" from the fact sheet. The name is misleading to some degree, used to be called the California Integrated Waste Management Board.

- 1) We have solid wastes and hazardous wastes at the site. I have no volume estimate.
- 2) Removal of solid wastes and hazardous wastes may happen concurrently, however these are two separate waste streams and will be handled by different entities and different disposal facilities.
- 3) I don't have a map of the air monitoring stations. START is working on an ArcGIS viewer

site for the air monitoring stations. There are two locations to the north on Fruitland Avenue, two locations to the south on [REDACTED] Ex. 6 - Personal Privacy, and one along the western property boundary.

- 4) I do not have information at this time regarding which disposal facilities CalRecycle's contractor AIS will use, but I believe they are in LA County.
- 5) The air monitoring stations are for total particulates in real-time, all assumed to be potentially hazardous metals in dust. Air samples are also taken at these locations for metals analysis. Additionally we will be monitoring onsite for potential VOCs as a precaution. No VOCs detections to date during assessment activities. Air monitoring and sampling will be conducted every day during work activities. I have consulted with ATSDR for action levels that will be safe for the community.
- 6) The debris curtain should be completed tomorrow and I will get some photos for you.

I am attaching the Action Memo which describes contaminants of concern. It may be helpful to include web addresses for the ATSDR Tox FAQs; these were distributed to residents in their residential information packages. They are also available in Spanish on the ATSDR website: <http://www.atsdr.cdc.gov/toxfaqs/index.asp>

Also attached are my comments to your draft and the 10/11 Fact sheets.

Thank you,

Subject: DRAFT: Fruitland Debris Removal Factsheet

Hello Jason,

Here is an early draft factsheet. I had a few questions I can incorporate before you review, or you can review and incorporate where necessary.

Questions:

- 1) Any idea of an estimate of the volume of anticipated recyclable material to be removed?
- 2) Will there be removal of any identified hazardous material, if any, concurrently with the removal of recycled material?
- 3) Do you have a map of the dust monitoring locations? I remember having a couple.
- 4) Is there an identified location where Cal Recycle will be sending the recyclable material? (not for the factsheet, just to help understand how far this will be sent and in-case we are asked directly)
- 5) Is there any description of what the air monitors will be testing for? Dust particulates for metals? How often will samples be taken?
- 6) Any photos of the completed debris curtain, drainage control devices or air monitors to include in the factsheet?

Thanks in advance for your help, let me know if there is more information you would like to include.

I thought about putting in a short section about the types of metals we've found on the property in significant quantities, so far, and the few we are concerned about, since Romie mentioned some community members had mentioned it. Let me know what you think. Thanks in advance.
